[LinkedIn](#) | [LeetCode](#) | [SmartInterviews Profile](#) | [GitHub](#)

Computer Science (Machine Learning) undergraduate who enjoys turning ML concepts into working systems — from ML-driven warehouse optimization and CNN-based image similarity search to RAG-powered applications. Comfortable across the ML pipeline, from data processing and model development to building the interfaces around them, with experience gained through academic projects, internships, and national-level hackathons.

## EDUCATION

**G. Pulla Reddy Engineering College, Kurnool** *Aug 2023 – Present*  
Bachelor of Technology, Computer Science and Engineering (Machine Learning) | CGPA: 8.74/10

**Narayana Junior College, Kurnool** *Jul 2021 – Mar 2023*  
Intermediate (MPC – Maths, Physics, Chemistry)

## TECHNICAL SKILLS

**Languages:** Python, SQL

**Web/Backend (Familiar):** Node.js, Express.js, Django, React

**AI/ML:** Machine Learning, LLM Fundamentals, RAG Basics

**Tools & Platforms:** Git/GitHub, Linux, Jupyter, VS Code

## PROJECTS

**Warehouse Execution System (WES) Optimization** *Python, Clustering Algorithms, Quantum Optimization*

- Built an ML regression model to predict productivity and applied SKU clustering to optimize product slotting across the warehouse.
- Designed a quantum-inspired optimization algorithm for order sequencing, reducing picker travel distance in simulation.
- Developed a simulation engine to benchmark warehouse throughput before and after optimization, validating efficiency gains.

**EcoBazarX – Sustainable E-Commerce Platform** *Python, Flask*

- Built a full-stack e-commerce platform using Flask with sustainability-based product filtering to help users discover eco-friendly alternatives.
- Implemented a search and recommendation engine to surface environmentally responsible products based on user preferences.
- Designed the product catalog and filtering logic to support scalable, criteria-based sustainability scoring.

## INTERNSHIPS

**Intern, Infosys SpringBoard (Virtual)** *Oct 2025 – Dec 2025*

- Developed a rule-based chatbot to handle predefined user queries and automate responses.
- Implemented a recommendation system using TF-IDF and cosine similarity to suggest relevant content based on user input.
- Integrated the chatbot and recommendation modules into a unified workflow, improving interaction efficiency and response relevance.

**Intern, Intel Unnati Industrial Training** *Dec 2025 – Jan 2026*

- Built an image similarity system using CNN-based feature extraction to generate embeddings from image datasets.
- Implemented FAISS for fast similarity search on high-dimensional image embeddings to improve retrieval efficiency.
- Designed a nearest-neighbor recommendation system to suggest visually similar images based on embedding distance.

## ACHIEVEMENTS

**Winner – Datathon 2.0, IIITDM Kurnool** *2026*

- Won first place among competing teams by building a Warehouse Execution System using ML-based productivity prediction, SKU clustering, and quantum-inspired optimization to improve warehouse efficiency.

**V3 National Hackathon** *2026*

- Developed a Library Management System using Retrieval-Augmented Generation (RAG) and Streamlit, enabling intelligent book search and query responses from library data.
- Built an interactive interface for users to retrieve book information and manage library resources efficiently.

**AI Ignite & Devnovate Hackathon** *2026*

- Developed a scene-level image segmentation system using the SegFormer model to accurately identify and segment objects in complex scenes.
- Implemented deep learning-based semantic segmentation for improved visual understanding and scene analysis.
